

ULTIMATE CAROUSEL

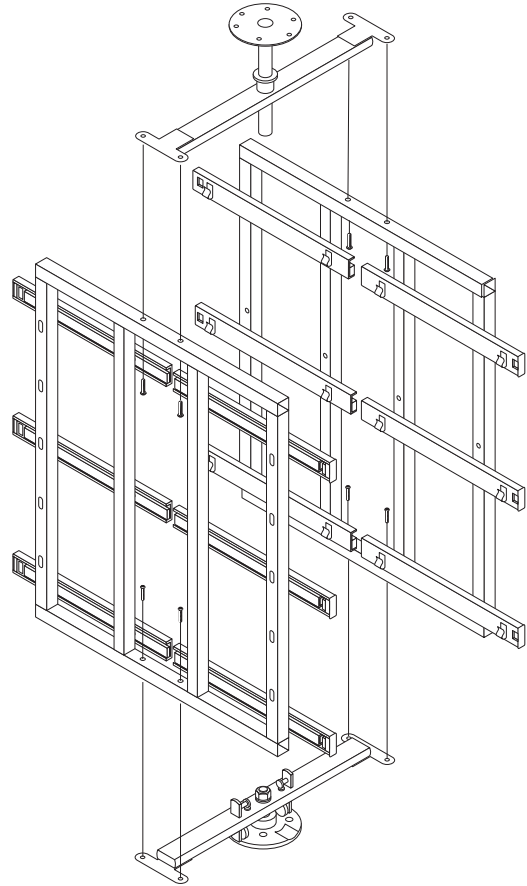

Assembly and fitting instructions

To fit 900mm x 900mm diagonal corner base unit.
Use +45° angled door hinges.

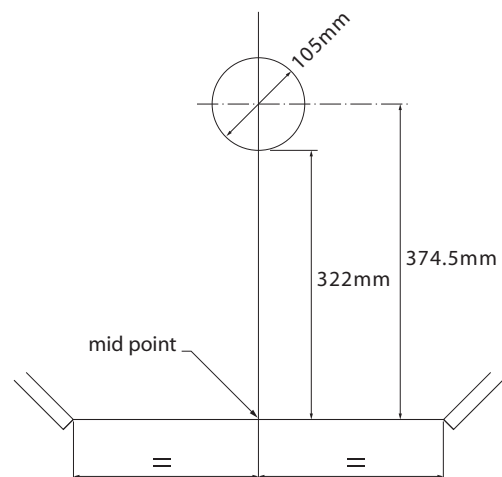

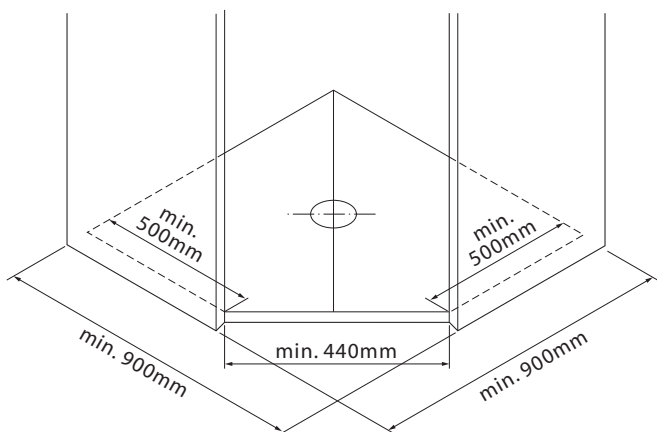

- 1** Prepare drillings for door hinges.
DO NOT FIT DOORS AT THIS STAGE.
NOTE: 60mm top and bottom centers for all hinges.

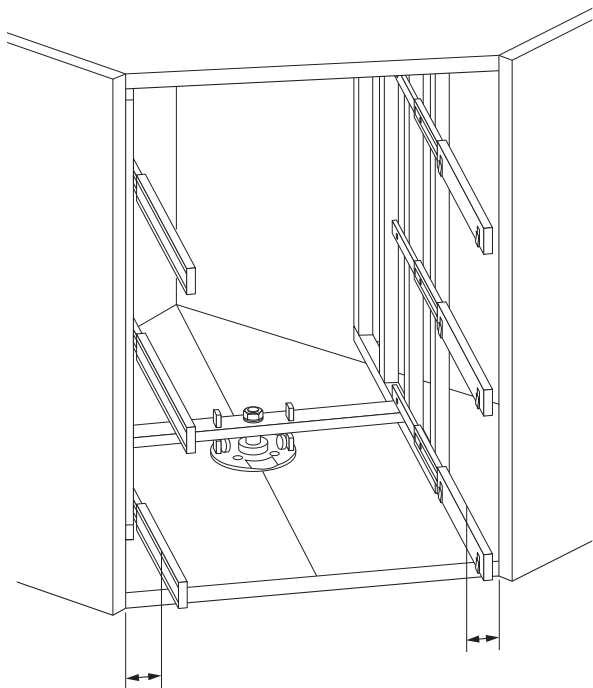

- 2** Fit side frames to top and bottom beams.

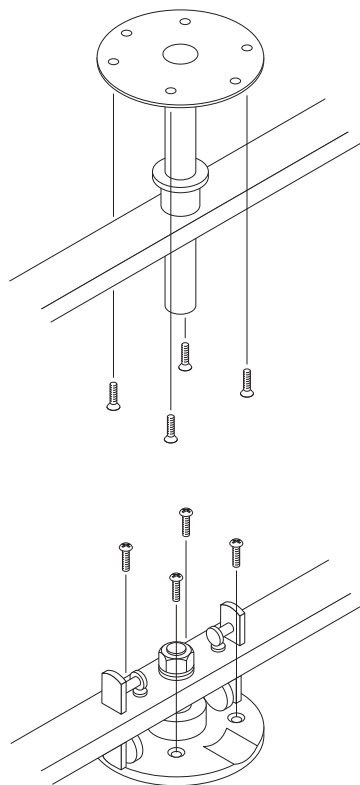

- 3** Mark base unit for fitting carousel.
Find mid point of opening and construct a pencil 'mitre line' from front to the rear corner and along that line draw circle and center line.

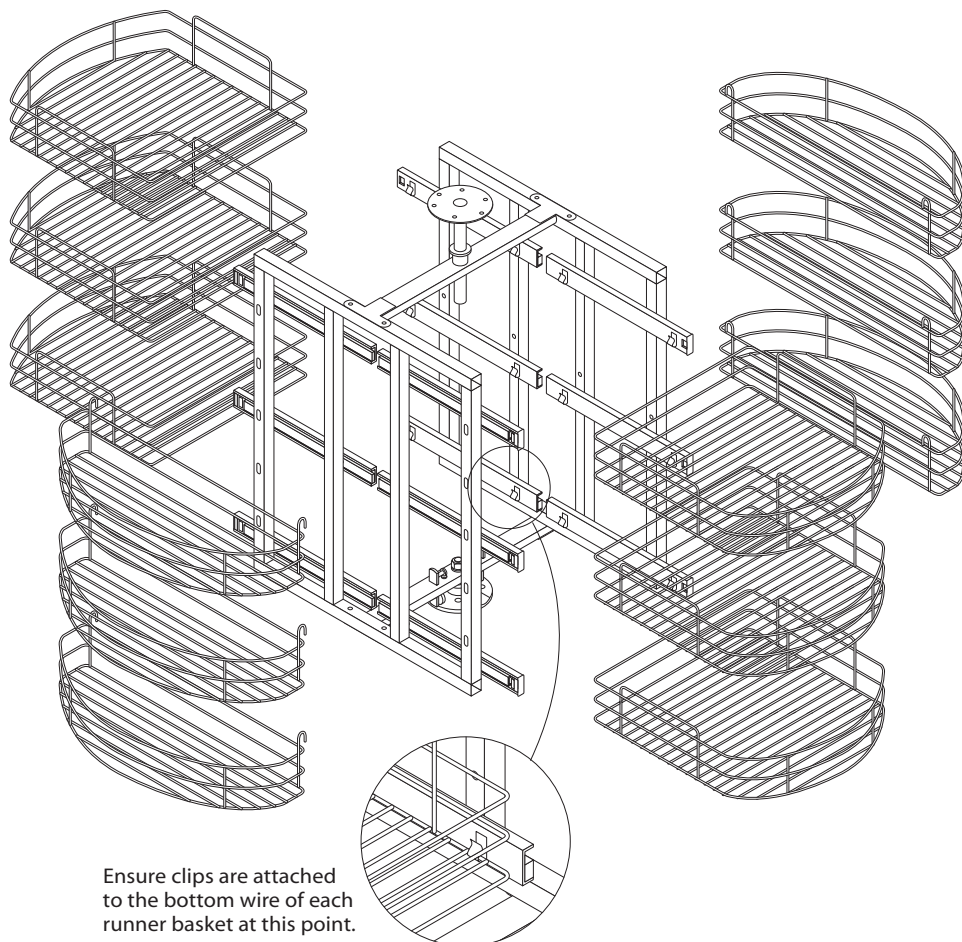

- 4** Insert carousel frame into base unit and align bottom mounting disc with pencil circle. Extend runners and adjust carousel position to ensure equal measurements between runners and cabinet sides.

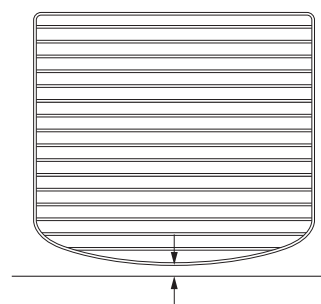

- 5** Mark and drill for top and bottom mounting discs. Fit screws.

- 6** Fit baskets. Carousel should turn 360° without fouling when baskets are fully retracted.

Ensure clips are attached to the bottom wire of each runner basket at this point.

When retracted there should be 5-10mm clearance between front of basket and edge of base/top and inside of door face.
